Javascript	MongoDB	React	Heroku
NodeJS	Mongoose	Redux	MongoLab
Express	Firebase	HTML/CSS	APIs/Documentation

MyMapApp [Javascript, Node, Express, MongoDB, Mongoose, MongoLab, EJS, Bootstrap]

I am the sole developer of this project. Users build up their personal map with all the cities and/or destinations that they have visited. They can then follow other users' maps to compare destinations. I used an authentication middleware for Node called Passport.js. This project is far from frinished , and I will continue to add features to this project. Project available for viewing at http://mymapapp.herokuapp.com

Personal Site - Lucasgarza.com [React, Redux, Javascript, JSX, ES6 Syntax, Webpack, Babel]

I update my personal site quite frequently to reflect new technologies that I am learning. Currently, my personal site is built with React + Redux. Some of the javascript in the project is written in ES6 syntax and then compiled using Babel. I also used Webpack as the module bundler for to project. The build of the site allows me to easily add and change content. I will continue adding more content as I continue building new projects.

StandardVision - Intern - (2015)

StandardVision is a global leader on large-scale architectural media technology, with projects in Shanghai, Dubai, Singapore, and USA. I supported the COO by analyzing domestic markets and creating a report targeting potential business for the company.

Nexenta Systems - Intern (2013)

Conducting market research pertaining to cloud structure and data storage. Conducted a competitive analysis on pricing and products comparative to Nexenta's.
